

## **NetBurner PK70 Personality Blade Development Program**

The NetBurner PK70 product can be easily customized to suit your application requirements by creating a custom “Personality Blade”. To facilitate these designs, NetBurner has created a prototype and production design service to design and build Personality Blades at a very low cost, with free Non-Recurring Engineering (NRE) hardware design costs for production orders.

The service works as follows:

- NetBurner Engineers work with you on the design concept
- Upon receipt of a deposit of \$5,000 USD we will begin the design. The cost of materials (PCB, components, etc), assembly and any custom software drivers for the prototypes will be deducted from this amount. The remaining balance will be put on account for you and applied as a credit towards future production orders. This mechanism provides free NRE and design services.
- Upon completion, the prototypes and low level software drivers will be delivered to you for testing and approval.
- We can then build production units, or you can build your custom Personality Blade at your own facility.

### **Terms and Conditions**

1. Designs shall conform to the mechanical dimensions of the standard PK70 Personality Blade and interface to the standard PK70 40-pin interface connector.
2. The credit balance shall be applied to orders of PK70EX-100CR and Personality Blades.
3. The credit shall be valid for a period of 1 year from delivery of the prototype Personality Blades.
4. The Personality Blade design shall be the property of NetBurner. However, the Customer shall have the right to build the Personality Blade at any location without license fees. If the Customer prefers to own the Personality Blade design, the Customer has the option to pay the total NRE expense at the time the prototypes are delivered.
