Overview
The PK70 EX NTP is a Network Time Server that synchronizes to GPS satellites to provide Stratum 1 level time accuracy to devices over a network. Configuration and up-to-date status information for the PK70 is easily accessed through an intuitive web interface. It is operational through an industrial temperature range and meets the demands of RoHS compliance. In addition, when accompanied with a development kit, the software itself is completely customizable and can be tailored to suit any number of needs or requirements.
